## DETAILED ACTION

### *Response to Applicant's Amendment*

1. Based upon the submitted amendments (via RCE) received 8-26-2005, examiner notes that claims 1-35 have been cancelled and claims 36-58 have been added.
2. Examiner notes that an examiner's amendment (shown below) has been entered to move the limitations of claim 37 into claim 36 and to cancel claim 37.
3. Examiner withdraws all rejections to all claims.

### *Examiner's Amendment*

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles E. Wands (25649) on 10-4-2005.

The application has been amended as follows:

**Claim 36.** A subscriber line interface circuit comprising;  
a high voltage analog section, containing analog operational  
circuits, operational parameters or which are programmable in  
accordance with respective bias currents supplied thereto, and to  
which power sufficient for any signaling conditions of tip and

Art Unit: 2643

ring conductors of a respective subscriber loop pair is supplied, and being operative to drive said tip and ring conductors of said respective subscriber loop pair in accordance with analog input and analog control signals supplied thereto; and

a low voltage digitally programmable signal generation and digital signal processing section, that is operative to interface voice and ringing signals with said analog circuits of said high voltage analog section and to monitor and control operational characteristics of said analog circuits of said high voltage section, said low voltage digitally programmable signal generation and digital signal processing section including

a digital signal processor (DSP) based codec, that is operative to interface said voice and ancillary signals, including low voltage signaling, and ringing signals with said analog circuits of said high voltage analog section; and

a supervisory digital signal processor, separate from said codec, that is operative to program respective values of bias currents that control operational parameters of respective ones of said analog operational circuits, said bias currents as programmed by said supervisory digital signal processor being coupled to said analog operational circuits and thereby establishing said programmable operational parameters thereof.

Art Unit: 2643

wherein said high voltage section includes a control and latch interface unit that is operative to receive and store from said supervisory digital signal processor a plurality of digital input signals for defining values of said bias currents through which said operational parameters of said respective ones of said analog operational circuits of said high voltage section are established.

**Claim 37** has been cancelled.

*Allowable Subject Matter*

5. **Claims 36,38-58** are allowed over the prior art of record
